## **DETAILED ACTION**

### ***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance: Even though, the prior art reference(s) Suzuki et. al., (Pub. No.: US 2001/0019536) teaches Packet transmission equipment with failure detecting unit in view of Mishra, (Patent No.: US 6,339,587) further comprising Path store unit with method of path availability check.

However, both prior art fails to teach, a single network monitoring and controlling device which perform functionality such as generate path topology table, generate quality information of a channel, perform path error detection, and path finding functionality based upon error detection, which further includes devices such as:

- a path information storing unit for path information on an entrance point and exit point,
- a quality deterioration detecting unit, which makes deterioration determination of path(s) based upon collected quality information on an entrance point and exit point via a path via point searching unit,
- a path via point information collection unit, which collects quality information of a channel, based upon information associated with a path via point searching unit,
- and, a quality deterioration point identifying unit for determining, whether or not a deteriorated path via point is present based upon the quality information of the path.

This taken with all other limitation is considered novel and non-obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
